SERGIO MARTÍNEZ

Spain | sergio@zkzoomer.io | **zkzoomer.io** | **github.com/zkzoomer** | linkedin.com/in/sergiomartc

Backend and blockchain engineer with 3+ years of experience designing and building financial infrastructure, spanning smart contracts, distributed systems, and backend services. Experience with execution logic, database migrations, APIs, and end-to-end integration across complex codebases. Background in lending, collateral management, and settlement workflows, with an emphasis on correctness and maintainability.

PROFESSIONAL EXPERIENCE

Senior Protocol Engineer at Matter Labs **Remote**
Engineering Team, Rust/Backend Infrastructure *Mar 2025 – Jul 2026*
- Led ZKsync v29 interoperability upgrade delivery, coordinating Rust backend and smart contract changes.
- Implemented Rust execution and state logic for protocol upgrades, including integration testing.
- Implemented backward-compatible DB schema changes across storage, sync., execution, and API layers.
- Broke upgrade branches into focused PRs, improving code review, integration tests, and release reliability.
- Open source PRs: server **#4221**, **#4730**, **#4769**, **#4756**, **#4608**; contract contributions on: **#1419**, **#1947**.

Blockchain Engineer at Term Structure **Taipei, Taiwan (R.O.C.)**
Blockchain / ZK Team *Aug 2023 – Oct 2024*
- Designed an upgradeable fixed-rate lending platform with offchain matching and onchain settlement.
- Modelled financial state transitions and invariants covering lending, borrowing, collateral, and settlement.
- Designed and built a custom zkVM execution engine for verifiable execution of protocol state transitions.
- Integrated multiple system components into a complete end-to-end lending and borrowing protocol.

Software Engineering Intern at Alteia **Toulouse, France**
Computer Vision Team *Feb – Jul 2023*
- Built a computer vision pipeline classifying components in electrical infrastructure from drone footage.

Grantee for the Ethereum Foundation **Remote**
Privacy and Scaling Explorations, Semaphore *Jan – May 2023*
- Built a full-stack privacy-preserving and verifiable application using the EF's Semaphore protocol. Link⤴

Software Engineering Intern at Airbus Defence and Space **Madrid, Spain**
Computer Vision Team, Flight Test Department *Feb – Jul 2021*
- Built a software simulation tool for evaluating different lidar sensors under flight test scenarios. Link⤴

EDUCATION

ISAE-SUPAERO **Toulouse, France**
MSc in Aerospace Engineering. Major: Embedded Systems *2021 – 2023*
- Researched ZK-based scaling solutions for embedded blockchains, published as an IEEE paper. Link⤴

Polytechnic University of Madrid **Madrid, Spain**
BSc in Aerospace Engineering. Major: Aerospace Sciences and Technologies *2016 – 2021*
- GPA: 8/10, top 5%. Special distinction in 8 subjects covering Math, Physics, and Computer Science.

SELECTED PROJECTS, GRANTS & RECOGNITION

Micro1 Expert, AI Trainer **Sep 2026 (Ongoing)**
- Contractor designing vulnerability remediation tasks and automated tests to train and evaluate AI models.

Selected Participant, Succinct ZK Residency **Sep – Oct 2024**
- ZK residency with builders from across the industry, built an SP1-based verifiable auction protocol. Link⤴

3x Hackathon Winner (ETHGlobal Paris, Istanbul; Filecoin Web3 Infinity) **2022 – 2023**

ADDITIONAL INFORMATION

Languages:
- Spanish: native
- English: bilingual (Cambridge C2, 220/230)
- French B1

Regulatory Awareness: AML/CFT, MiCA, DORA
Tools: Git, Docker, Linux, CI/CD

Technical Skills:
- Rust, Python, TypeScript, Solidity
- Tokio, async Rust, PostgreSQL, SQL, RPC APIs
- Database migrations, persistence, integration tests
- Distributed systems, state machines, settlement
- Digital assets, DLT, Ethereum/EVM, DeFi, ZK
